- **Material:** metal
- **Color:** black
- **Weight:** 350 g
- **Format:** PMAG type
- **Compatibility:** Umarex HK416 GBBR and VFC M4 GBBR platforms

A third generation revised in its upper part

The **VFC VMAG Gen3** features an updated 30-round gas magazine design with a modified upper section. This improvement aims for greater stability and optimized **bolt catch** operation, a particularly important aspect of **GBBR** replica performance.

Improved gas flow

This third generation also benefits from improved gas flow. On a **GBBR** platform, the magazine doesn't just store BBs; it also contains the gas necessary for the replica to function. The work done on the gas flow is therefore one of the key technical improvements in this version.

Dedicated command for dry firing

The magazine includes a button to activate **dry fire** , or **firing without ammunition** . This function allows the replica to operate without loading BBs, a feature directly integrated into the Gen3 design.

HK416 and M4 GBBR compatible

The advertised compatibility covers the **Umarex HK416 GBBR** as well as the **VFC M4 GBBR** platforms. With its 30-round capacity and PMAG-type format, this VMAG fits into the category of magazines designed for gas-powered airsoft guns of these families.

FAQ

What is the purpose of the dry fire button on this charger?

The dry fire button allows the use of the dry firing function, thus running the replica cycle without a supply of BBs.

What does the Gen3 version offer compared to the previous design?

The Gen3 version brings three documented improvements: a redesigned upper section for greater stability and optimization of the bolt catch, a dry-fire control and an improvement in gas flow.
