PRODUCTION HISTORY
 Designer: Mikhail Kalashnikov
 Designer: Soviet Union
 Designer: 1945-1946
 Manufacturer: 1948 Present
 Product: 1948 Present

SPECIFICATIONS
 Action: Gas-Operated, Rotating Bolt
 Feed System: 30 Round Disposable Box Magazine
 Chamber: 7.62×39mm
 Caliber: 12.7×39 (5.10×13.9mm)
 Length: 870 mm (34.3 in)
 Sight: Adjustable Iron Sights
 Rate of Fire: 600 Rounds/Minute
 Effective Range: 710 m (2,330 ft)
 Weight: 4.3 kg (9.5 lb)

OVERVIEW
 The AK-47 is a 7.62 mm assault rifle developed in the Soviet Union by Mikhail Kalashnikov in the late 1940s. It is the most widely produced rifle in the world, with over 100 million units produced.

DISASSEMBLY
 Disassembling the rifle involves the operator detaching the magazine and removing the receiver. The receiver is attached to the rifle and the operator inserts the chamber of the receiver into the receiver housing of the rifle. The operator then inserts the magazine into the magazine housing and the rifle is ready to be used.

OPERATING CYCLE
 To fire, the operator inserts a loaded magazine, moves the selector lever to the desired position, pulls back and releases the charging handle, arm, and then pulls the trigger. In the loading process, the trigger is engaged and depressed against the receiver slide. When the selector is in the automatic position, the rifle continues to fire automatically cycling through rounds into the chamber until the magazine is exhausted. An empty magazine is ejected from the rifle. As each round is ejected, the rifle's gas system forces the bolt back through the barrel, opening the gas ports. The process, in turn, is done backwards, moving the bolt carrier, which causes the bolt to move forward, opening the spent round, and discharging a new round when the next firing cycle begins.
