**PRODUCTION HISTORY**

Designer: Mikhail Kalashnikov  
 Designer: Soviet Union  
 Designer: 1945-1948  
 Manufacturer: 1948 Present  
 Product: 1948 Present

**SPECIFICATIONS**

Action: Gas-Operated, Rotating Bolt  
 Feed System: 30 (30) Round Disposable Box  
 Chamber: 7.62×39mm  
 Caliber: 7.62mm (30.06 in)  
 Length: 870 mm (34.25 in)  
 Barrel Length: 370 mm (14.57 in)  
 Sight: Adjustable Iron Sights  
 Weight: 6.63 kg (14.61 lb)  
 Muzzle Velocity: 710 m/s (2,330 ft/s)  
 Effective Range: 500 m (1,640 ft)

**OVERVIEW**

The AK-47 is a 7.62 mm assault rifle developed in the Soviet Union by Mikhail Kalashnikov in his workshop, the Izhmash AK-47 and the AKS-47 variant equipped with an under-barrel folding "shoot-off" stock.

Design work on the AK began in 1944. In 1946 the rifle was presented for official military tests, and a year later the first stock version was introduced into service with select units of the Red Army, the Russian Civil Guard and the Ministry of Internal Affairs (MVD).

The AK-47 (officially) succeeded by the Soviet Army in 1949. It was later adopted by the majority of the member states of the former Warsaw Pact. The AK-47 was also used as a basis for the development of many other types of individual and crew-served weapons.

It was one of the first true assault rifles and, due to its reliability, low production cost and ease of use, remains the most widely used assault rifle in the world. It is used by the police, the military, and paramilitary forces in many countries.

**OPERATING CYCLE**

To fire, the operator inserts a loaded magazine, moves the selector lever to the desired position, pulls back and releases the charging handle, arm, and then pulls the trigger. In the loading process, the trigger is engaged and depressed down to the next shot. On the success of the middle position (half-actuated), the rifle continued to be automatically cycling (open rounds into the chamber, with the magazine is recharged, the bolt locks through the barrel, a portion of the spent casing is ejected and is directed into the gas block above the barrel, where it impacts the gas piston. The piston, in turn, is driven backward, moving the bolt carrier, which causes the bolt to move backward, opening the next round, and chambering a new round when the next firing pin strike starts.

**DISASSEMBLY**

Disassembling the rifle involves the operator disengaging the magazine catch and depressing the magazine. The charging handle is pulled to the rear and the operator pushes the chamber to the rear of the receiver while simultaneously lifting up and the rear of the cover to remove it. The operator then pushes the spring assembly forward and lifts it to remove the spring assembly. The bolt carrier and the bolt. The operator then removes the bolt by pulling it to the rear of the bolt carrier. Finally, the bolt is removed, ensuring the necessary on the underside of the bolt carrier and the bolts. Forward and back, then cleaning the chamber and any residual oil from the firing pin, the bolt, and gas piston. Turn on safety and magazine.

A60717	Viper Gun Cleaning Mat - AK47	Vente libre	24.00 € incl. tax

Absorbent mat for carrying out maintenance and repair of airsoft replicas, airgun pellet rifles, firearms. Its foamed texture makes it possible to absorb light shocks and to work in the best conditions. The AK47 print on this carpet traces the history of this weapon, its diagram and its maintenance instructions.

- Dimensions: 89x29cm
- Thickness: 3mm
- Materials: 3mm thick neoprene foam and polyester printed on the top.
