- Sold without battery or battery charger.

Earning many rave reviews and establishing a growing and engaged fan base over the years, ASG has continued to develop and refine the CZ Scorpion EVO AEG platform since its initial launch in 2014.

Now the EVO has 'leveled up' again, this time in the form of the all-new BOOST Edition - bringing upgrades to the party that ensure that straight out of the box this AEG is ready. to face all comers on the battlefield better than its predecessors.

What does the Boost edition give you compared to previous versions of the EVO?

Well, a closer look inside the BOOST EVO reveals that it features several parts from our high-quality 'ULTIMATE' upgrade range, in the key areas that matter most.

With a Leviathan ECU on board, the EVO Boost offers crisper trigger response and programmable firing modes. While the Leviathan app installed on your smartphone, allows you to further fine-tune the rate of fire, activate pre-cocking, active braking and more.

Such as the high-performance, CNC-designed ULTIMATE BOOST 30k short-axis motor for higher rpm, and the ULTIMATE BOOST 16.5:1 gearset that delivers super-smooth and reliable power transfer without breakage, thanks to tolerances higher gear train compared to standard options.

While the presence of an anti-reverse lock in the CNC gearbox allows for pre-cocking and adds that extra piece of mind that while the EVO BOOST's advanced electronics mean precise motor control, the AEG is protected from potential damage when used at the high end of performance.
