22-round gas magazine for KJ Works KP-13 airsoft replica.

22-round magazine for KP-13 airsoft replica from KJ Works. This charger recharges with CO2 using a 12g cartridge.

Despite everything you can read on the Internet and in the manufacturer's manual, we recommend that you never introduce silicone or grease into airsoft magazines. Grease has a devastating effect on a replica because it will directly grease the rubber of the hop-up and the internal barrel, which leads to a loss of precision and even more dust fixation. Never introduce chemicals such as grease, silicone spray or the like into the charger, hop-up, balls, internal parts of the AEG. Silicone is only used on pneumatic parts such as the cylinder of a gear box or a movable O-ring.

- Limit the number of pellets to 70-80% of the magazine capacity, never force the introduction of pellets with a pellet charger.
- Too many beads can slow down nozzle operation and may impact ball path and feed.
- If you want to keep your magazine for many years, it is also imperative that you do not operate the spring to its maximum capacity.
- Never store your loaded magazine for a long period of use, the spring charged for a long time may be irreparably damaged with a settling effect.
- Use balls with impeccable sphericity.

Features :

- Weight in kg: 0.22
- Country of manufacturer: Taiwan
- Material: Metal
- Manufacturer: KJW
- Magazine capacity: 23 rounds

- Operating principle: GAS GBB
- Black color
