A gain in precision and range for your Vorsk replica!

The **VMP-2MD/D Inner Barrel Extension** precision inner barrel Vorsk stainless steel durability wear resistance

Its internal diameter of **6.03 mm** air compression notable improvement in range and precision without any modification necessary

Why choose this internal barrel extension?

The **inner barrel** upgrade is one of the most effective improvements for airsoft replicas. A reduced diameter (**6.03 mm**) improves the guidance of the balls, reducing their dispersion and providing better **shooting consistency**.

Thanks to its **stainless steel construction**, this inner barrel is **protected against corrosion**, ensuring a long life and consistent performance. It is **ideal for players wishing to gain precision** without modifying other components of their replica.

Simplified installation

- Compatible with Vorsk **VMP-2D and VMP-2MD** only.
- Easily replaced without the need for additional adapters.
- May require **hop-up readjustment** after installation for optimal performance.

Performance and benefits:

- ? **Improves accuracy** : Tightened internal diameter reduces shot dispersion.
- ? **Increases range** : Better air compression for more efficient propulsion.
- ? **Optimal durability** : stainless steel, resistant to extreme conditions.
- ? **Easy to install** : Fits directly onto compatible models without modification.

FAQ - Frequently Asked Questions

1. Is this extension compatible with other replicas than the VMP-2D and VMP-2MD?

No, this inner barrel is specifically designed for these two models and is not suitable for other replicas.

2. Is the installation complex?

No, the replacement is simple and does not require any specific tools, except a hex key.

3. Will I notice an increase in the power of my replica?

Mainly, this inner barrel improves **accuracy and range**. A slight increase in velocity can be observed, but this depends on the hop-up setting.

4. Do I need to adjust my hop-up after installation?

Yes, a hop-up adjustment is recommended to optimize the performance of your replica after installation.

5. How to maintain this internal barrel?

Regular cleaning with a rod and a lint-free cloth soaked in a little silicone is sufficient to **prevent the accumulation of residue** and maintain optimal precision.
