Access our eyeglass frames by clicking here: https://www.europarm.fr/fr/store/sscategorie-1406-Montages-de-lunettes

Calculation of the twilight index: square root of the product of the magnification and the diameter. For a 6x24 telescope, this is therefore the square root of 6x24, that is to say the square root of 224 = 12.

The higher the twilight index, the better. The higher the index, the more detail you will see.
