The AK GBBR with the most precise and accomplished details

This replica is inspired by the classic AK-74M model. With its all-steel construction, simulated surface treatment, and engravings, it captures all the details of the original weapon. Some authentic AK-look parts and accessories can be installed directly. The VFC AK GBBR is undoubtedly the most detailed and accomplished model on the airsoft market.

Features

- Length of folded stock: 705mm
- Stock length extended: 943 mm
- Internal barrel: 285 mm
- Weight without charger: 2920g
- Weight with charger: 3310g
- 42 BB's gas charger

- **The enlarged diameter steel slide provides excellent recoil feel**

The large, integrated CNC steel slide requires no additional upgrades. It features a simulated slide head and a long-stroke piston. The central cylinder of the GBB propulsion system has a diameter of 22 mm, ensuring excellent and powerful recoil.

- **The control parts are made entirely of sturdy and durable steel**

The all-steel fire control components and fire control group incorporate a braided wire hammer spring inside, as well as a dummy (non-functional) automatic rate of fire reducer. This not only enhances durability, but also illustrates the brand's commitment to achieving an unparalleled level of realism.

- **The cylinder head stroke is adjustable**

This time, a variable stroke design has been added, allowing users to adjust and modify the bolt stroke according to their needs. In the long stroke setting, the bolt improves shooting realism

thanks to greater recoil. In the short stroke setting, the installation of a "short stroke bolt damper" increases the rate of fire, allowing for more effective firepower in short bursts, especially on the airsoft battlefield.

- **Features Eazy HOP System, easily replaceable inner barrel and HOP-UP seal**

The AV-74M GBBR is equipped with the Eazy HOP adjustment system, allowing the pressure point of the HOP-UP to be adjusted using a thumbwheel and a slight pull on the slide. The HOP-UP mount is easy to disassemble and compatible with industry-standard VSR10 specifications. With the included precision inner barrel and HOP-UP gasket, users can easily improve their shooting accuracy.

- **The "Warsaw Pact" rail spec allows for the installation of various optics**

Sights like the PSO-1 or NSPU install effortlessly, making them excellent choices for use on the airsoft battlefield.

- **Large capacity gas tank, lightweight design magazine**

The AV-74M magazine features VFC's signature lightweight aluminum alloy construction and weighs only 388g. Despite its lightness, the magazine has been carefully designed for its aesthetics, particularly thanks to the shape of its top edge, which mimics that of a real firearm magazine. It can hold 42 BBs and its internal reservoir reaches an impressive capacity of 107cc, significantly improving your range. This increased capacity is ideal for meeting the needs of the AV-74M's large cylinder. In addition, it features a fire stop function after the last BB and a dry fire mode, making it an ideal tool for collectors and airsoft players!
