**Improve your nighttime games with BLS 0.30 g BIO tracer balls, combining high precision and respect for the environment.**

### Tracer Beads for an Unparalleled Nighttime Experience

**BLS 0.30g BIO Tracer BBs** are specially designed for airsoft games in low-light or nighttime conditions. Thanks to their phosphorescent coating, they light up when fired, providing optimal visibility of the trajectory. This feature not only improves accuracy, but also adds a spectacular visual dimension to your games.

### Eco-responsible Manufacturing

Made from **PLA (polylactic acid)**, a biodegradable polymer derived from natural resources like corn starch, these beads decompose naturally without harming the environment. They are an eco-friendly alternative to traditional plastic beads, addressing growing concerns about sustainability and environmental impact.

### Compatibility and Performance

With a precise diameter of **5.95 mm ± 0.01 mm**, these BBs ensure perfect compatibility with replicas equipped with tracer devices, such as tracer silencers or special hop-up chambers. Their weight of **0.30 g** is

ideal for replicas displaying an energy between 1.5 and 1.9 joules, offering a perfect balance between range and accuracy.

### **Instructions for Use**

To fully benefit from the tracer effect, it is recommended to use these pellets with a tracer device that will activate their green luminescence when fired. If you do not have such a device, you can expose the pellets to a light source before use to temporarily activate their phosphorescence. Store the pellets in a dry place away from light to preserve their properties.
