LR1099	Well Sniper MB10C Spring Black	Vente libre	25	Spring	219.00 € incl. tax

A bolt spring platform type VSR10 with included 3-9x40 scope and numerous upgrade possibilities.

The Well MB10C combines a **VSR10-type** action with a polymer stock inspired by the SV98 and a tapered, fluted metal outer barrel. Its compatibility with several VSR10 components facilitates upgrades, while the **3-9x40 scope** with rings is included. This accessible bolt-action spring configuration is ideal for starting out in **airsoft sniping** or as a base for future upgrades.

- **Brand:** Well
- **Model:** MB10C
- **Type:** Airsoft sniper rifle
- **Operation:** spring, manual cocking
- **Color:** black
- **Stock:** polymer, profile inspired by the SV98
- **Outer barrel:** metal, conical and fluted
- **Mechanical:** VSR10 type with specific features
- **Hop-up unit:** specific, compatible with VSR barrels and buckings
- **Internal barrel:** type VSR10
- **Hop-up joint:** type VSR10
- **Pneumatic:** type VSR10
- **Expansion block:** type VSR10
- **Spring:** type VSR10
- **Top rail:** Metal Picatinny
- **Lower rail:** Picatinny at the front of the barrel
- **Scope:** 3-9x40 included with mounting rings
- **Cocking lever:** right-handed configuration
- **Safety:** lever located on the right side

- **Flame hider:** removable for mounting a silencer adapter
- **Sling attachments:** one at the front of the handguard and one at the buttstock.
- **Magazine capacity:** 25 rounds
- **Included accessories:** 3-9x40 scope, mounting rings, sling and BB loader

A silhouette inspired by the SV98

The **Well MB10C** adopts an architecture that departs from the classic VSR platform profile. Its **polymer** stock is visually inspired by the SV98 and extends into a tapered, fluted metal outer barrel. This combination gives the **airsoft sniper** a distinctive identity while retaining mechanics largely derived from the VSR10 series.

Two attachment points allow for the use of the supplied sling: one is located at the front of the handguard, the other at the buttstock. The charging handle is configured for a right-handed user, as is the safety lever located on the right side.

VSR10 type mechanics and upgrade possibilities

It's primarily in the stock that the technical connection to the **VSR10** becomes apparent. The **Well MB10C** uses a similar mechanism, while retaining certain features specific to the model. The pneumatic system, trigger assembly, and spring are all VSR10 standard.

The hop-up unit is one of its distinctive features: it's specific to the MB10C but accepts **VSR barrels** and **hop-up buckings**. The stock inner barrel and bucking are themselves VSR10 type. For a player looking to gradually upgrade their bolt-action spring, this design offers several possibilities without making the entire mechanism fully interchangeable with any VSR10 part.

3-9x40 scope supplied with its rings

The configuration includes a **3-9x40 scope** and its mounting rings. The metal Picatinny rail on the top accommodates this optic and also allows for its replacement with other equipment using a compatible interface.

For a first **airsoft sniper** setup, the inclusion of the optic in the box eliminates the need to assemble the replica, scope, and rings separately. An additional Picatinny rail is also installed under the front of the stock for compatible accessories.

Spring operation and manual cocking

This platform is spring-powered. Each shot therefore requires manual cocking via the side lever, following the characteristic principle of a **spring-powered airsoft sniper rifle**. This mechanical design requires neither a battery nor a gas supply to operate.

The included magazine has a capacity of 25 BBs. A BB loader is also included in the box and accompanies the replica along with the scope, its rings, and the sling.

A flash hider designed to accommodate an adapter

The flash hider can be unscrewed to allow the attachment of a **silencer adapter**. As the source does not specify the thread standard of this adapter, it is intentionally not considered to have a specific diameter or pitch.

A foundation for discovering or developing sniping skills

The MB10C's logic ultimately rests on two levels of use. Its included 3-9x40 scope allows for the immediate creation of an **airsoft sniping** setup, while its VSR10-type mechanism provides additional appeal for players who later plan to upgrade their internals.

This positioning explains the model's appeal both as a first bolt-action spring replica and as a starting point for an upgrade project. Documented compatibilities include the inner barrel, hop-up bucking, pneumatics, trigger unit, and VSR10-type spring, with a hop-up unit specific to the MB10C.

FAQ

Is the Well MB10C fully compatible with VSR10 parts?

No, the entire replica should not be considered universally compatible with the VSR10 standard. Its mechanics adhere to this standard with some specific features. The hop-up unit, in particular, is unique to this model but accepts VSR barrels and buckings. The pneumatic system, trigger assembly, and spring are also listed as VSR10 type.

Do I need to buy a separate pair of glasses to start playing?

No. A 3-9x40 scope and its mounting rings are included in the box. The replica has a top metal Picatinny rail that accepts this optic and also allows the use of other compatible equipment.

Does the spring-powered operation require a battery or gas?

No. The spring system operates mechanically using a spring and requires manual cocking between each shot. Therefore, it does not use an AEG battery or gas supply to function.
