A68822N	Lancer Tactical x SLR Tracer Airsoft Flare Mono Eshooter	Vente libre	M14 - G/CCW	5.4	45	Black	140.00 € incl. tax

A smart and compact airsoft marker, compatible with green and red BBs, featuring 3 lighting modes and a battery life of up to 35,000 shots.

The **Flare Mono Lancer Tactical x SLR by Eshooter** is a **smart airsoft tracer** resulting from a collaboration between three renowned brands. Compatible with green and red Tracer BBs, it features four high-brightness LEDs, three operating modes, and a sensor capable of firing over 50 BBs per second. Compact (54 mm), lightweight (45 g), and IP64 certified, it incorporates a USB-C rechargeable battery offering up to 35,000 shots.

- **Brands:** Lancer Tactical x SLR Rifleworks by Eshooter
- **Model:** Flare Mono Smart Airsoft Tracer Unit
- **Reference:** ES-SLR-C208
- **Type:** Light tracer for airsoft replica
- **Compatibility:** standard balls, green Tracer and red Tracer
- **Operating modes:** 3
- **Color options:** 3
- **Lighting:** 4 high-brightness LEDs
- **Maximum advertised rate of fire:** over 50 BBs/second (50+ RPS)
- **Battery:** Built-in rechargeable 200 mAh
- **Charging:** USB Type-C
- **Advertised autonomy:** up to 35,000 shots per charge
- **Activation:** Shake-to-Wake vibration sensor
- **Automatic sleep mode:** after 5 minutes of inactivity
- **Protection rating:** IP64
- **Length:** 54 mm

- **Diameter:** 28 mm
- **Weight:** 45 g
- **Included accessories:** USB-C cable and user manual

An airsoft tracker resulting from an exclusive collaboration

The **LT x SLR Flare Mono by Eshooter** is the result of an official collaboration between **Lancer Tactical, SLR Rifleworks, and Eshooter**. This smart airsoft tracer combines a compact tactical design with lighting technologies developed by Eshooter, a specialist in electronic accessories for airsoft replicas.

Designed for players seeking high-performance equipment without complex programming, the **Flare Mono** prioritizes intuitive use and quick adjustments. It's equally suited to nighttime games, CQB sessions, or dimly lit indoor arenas.

Compatible with green and red Tracer balls

The **Eshooter Flare Mono tracer** incorporates **4 high-brightness LEDs** designed to excite the luminescent pigments of the Tracer beads as they pass through the device.

It supports both **green and red Tracer BBs**, offering great versatility for players using different types of ammunition. It also accepts standard airsoft BBs, even though these do not produce a luminescent effect.

The system offers **3 color options and 3 operating modes**, allowing the lighting effect to be quickly modified according to the player's preferences and the game conditions.

A high-speed sensor compatible with over 50 RPS

Thanks to its **high-speed sensor**, the Flare Mono can detect the passage of more than **50 BBs per second**. This capability makes it compatible with high-rate-of-fire AEG replicas, provided it is installed correctly.

The rapid detection ensures consistent illumination of the Tracer BBs, even during sustained bursts of fire. This gives players improved visibility of the trajectories during their airsoft sessions.

Automatic Shake-to-Wake activation

The **Flare Mono Smart Tracer** features a **smart vibration sensor** that automatically wakes the device when it detects movement. This feature, called **Shake-to-Wake**, eliminates the need to manually reactivate the tracker after periods of inactivity.

To conserve battery life, the system automatically goes into standby mode after **5 minutes of inactivity**. This intelligent power management helps limit energy consumption between different gaming sessions.

Up to 35,000 shots with a USB-C rechargeable battery

The tracker incorporates a **200 mAh rechargeable battery**, offering a claimed battery life of up to **35,000 shots per charge**, depending on usage conditions.

Charging is done directly via **USB Type-C** using the included cable. This solution eliminates the need for disposable batteries and simplifies equipment preparation before a game.

A compact format weighing only 45 grams

With a length of **54 mm**, a diameter of **28 mm** and a weight of only **45 grams**, the Flare Mono maintains a particularly small footprint.

Its lightweight design helps limit the addition of mass at the end of the replica, a significant advantage for compact configurations, SMG-type replicas, and CQB equipment.

IP64 protection for outdoor parts

The **Lancer Tactical x SLR Flare Mono** features **IP64 protection**. This rating guarantees protection against dust ingress and water jets from various directions.

The device is therefore adapted to the usual conditions encountered on airsoft fields, particularly in the presence of dust or humidity. However, it is not designed to be submerged.

Contents of the box

- 1 Lancer Tactical x SLR Flare Mono tracer by Eshooter
- 1 USB Type-C charging cable
- 1 user manual

FAQ

Does the Flare Mono work with Tracer BIO beads?

Yes. The **Flare Mono Eshooter** is compatible with green and red Tracer beads, including the biodegradable BIO versions. The biodegradable material does not interfere with the tracer's operation, provided the beads contain compatible luminescent pigments.

Do standard airsoft BBs become luminous with this tracer?

No. **Standard non-luminescent marbles** can pass through the device, but they do not produce a light trail. To benefit from the Tracer effect, you must use marbles specifically designed to react to the tracer's light.

Can the Flare Mono be used on an HPA replica or a high-rate-of-fire AEG?

The **Flare Mono** sensor supports a rate of fire exceeding **50 BBs per second** . It is therefore suitable for high-rate-of-fire AEG and HPA compatible configurations. However, it is still necessary to verify the mechanical compatibility of the mount with the replica.

Does the plotter need to be switched on manually for each game?

The **Shake-to-Wake** system automatically wakes the tracker with a vibration when it is in standby mode. After 5 minutes of inactivity, the device returns to standby mode to conserve battery power.

Can the Flare Mono be used in the rain?

Its **IP64** rating means it is resistant to splashes of water and dust. It can therefore withstand moderate exposure to rain during an airsoft game. However, it should not be immersed or cleaned under a high-pressure water jet.

What threading is required to install this tracer on an airsoft replica?

The thread type must be checked on the technical specifications of the commercially available version. Many airsoft replicas use a **14mm counter-clockwise (14mm CCW) external barrel thread** , but compatibility with this specific model must be confirmed before installation.

Can this tracer be used with 0.32g or larger marbles?

Yes. The tracer's operation relies on the detection and illumination of luminescent BBs, not on their weight. **Tracer BBs of 0.32 g** or more can therefore be used, provided they are compatible with the replica and the device.
