**Improve your nighttime games with BLS 0.30 g BIO tracer balls, combining high precision and respect for the environment.**

**BLS BIO Tracer BBs** offer **exceptional accuracy** and a **luminous trajectory** ideal for nighttime play. Made from biodegradable PLA, they are environmentally friendly while ensuring optimal performance. Their ultra-smooth finish ensures flawless feeding in all replicas equipped with tracers.

#### Technical characteristics:

- **Weight per ball** : 0.30 g
- **Diameter** : 5.95 mm ± 0.01 mm
- **Type** : Biodegradable tracer
- **Material** : PLA (polylactic acid)
- **Color** : Phosphorescent green
- **Compatibility** : Replicas equipped with tracer devices
- **Packaging**: Bag of 2000 balls
- **Box**: 30 Bags

**Tracer Beads for an Unparalleled Nighttime Experience**

The **BLS 0.30g BIO Tracer** BBs are specially designed for airsoft games in low-light or nighttime conditions. Thanks to their phosphorescent coating, they light up when fired, providing optimal visibility of the trajectory. This feature not only improves accuracy, but also adds a spectacular visual dimension to your games.

### **Eco-responsible Manufacturing**

Made from **PLA (polylactic acid)** , a biodegradable polymer derived from natural resources like corn starch, these beads decompose naturally without harming the environment. They are an eco-friendly alternative to traditional plastic beads, addressing growing concerns about sustainability and environmental impact.

### **Compatibility and Performance**

With a precise diameter of **5.95 mm  $\pm$  0.01 mm** , these BBs ensure perfect compatibility with replicas equipped with tracer devices, such as tracer silencers or special hop-up chambers. Their weight of **0.30 g** is ideal for replicas displaying an energy between 1.5 and 1.9 joules, offering a perfect balance between range and accuracy.

### **Instructions for Use**

To fully benefit from the tracer effect, it is recommended to use these pellets with a tracer device that will activate their green luminescence when fired. If you do not have such a device, you can expose the pellets to a light source before use to temporarily activate their phosphorescence. Store the pellets in a dry place away from light to preserve their properties.
