BB2032	BLS Airsoft Tracer BIO BBs 0.28 g - 1 kg	Vente libre	0.28	White	33.90 € incl. tax

Biodegradable and luminescent 0.28g airsoft BBs, offering excellent dimensional consistency for accurate trajectories and visibility in the dark.

BLS Tracer BIO 0.28g airsoft BBs combine precision, consistency, and nighttime visibility . Their calibrated diameter of 5.95 mm (± 0.015 mm) ensures excellent uniformity. Compatible with tracers designed for green BBs, they allow you to see trajectories in low light. Packaged in **1 kg bags, containing approximately 3,571 BBs** .

- **Brand:** BLS
- **Type:** Tracer BIO airsoft balls
- **Caliber:** 6 mm
- **Actual diameter:** 5.95 mm
- **Dimensional tolerance:** ± 0.015 mm
- **Unit weight:** 0.28 g
- **Property:** biodegradable
- **Light effect:** green luminescence
- **Appearance of the marbles:** white, according to the specifications provided.
- **Compatibility:** 6mm airsoft replicas suitable for 0.28g BBs
- **Recommended accessory:** marker compatible with green luminescent beads
- **Packaging:** 1 kg plastic bag
- **Quantity:** approximately 3,571 marbles
- **Reference:** 1kg-tr28g

Tracer BIO BLS pellets for precise and visible shots

BLS Tracer BIO 0.28g airsoft BBs are designed for players looking for consistent projectiles, suitable for both regular games and nighttime sessions. They combine **BLS** ' renowned manufacturing quality with luminescent technology that allows you to see the trajectory of shots in the dark.

Their **0.28g** weight offers a good compromise between velocity and trajectory stability. They are particularly well-suited to AEG and GBB replicas, whose power and Hop-Up system allow for optimal use of this BB weight.

Offered in **1 kg bags** , they represent approximately **3,571 marbles** , a practical format for regular players wishing to have a reserve of consumables.

Tracer technology: green light trajectories

BLS Tracer BIO Green contains luminescent pigments capable of absorbing light energy and then releasing it as visible light.

When they pass through an **airsoft tracer compatible with green BBs** , they are briefly exposed to intense light which activates their luminescence. Their trajectory then becomes visible in the dark, allowing the player to better observe the movement of the projectiles.

This feature is particularly appreciated during **night games** , **CQB** sessions or on dimly lit indoor fields.

To fully benefit from this effect, the use of a compatible tracer is recommended. Without this device, the BBs can still be used like standard airsoft BBs, but their luminescence will be much less noticeable.

A calibrated diameter of 5.95 mm for excellent consistency

The **BLS 0.28g Tracer BIO balls** have a **nominal diameter of 5.95 mm** , with a stated tolerance of only **± 0.015 mm** .

This dimensional precision helps maintain consistent feeding and passage through the inner barrel. Combined with excellent sphericity, it minimizes variations due to differences in shape or diameter between projectiles.

Manufacturing quality is an important criterion for players using **precision barrels** or properly tuned Hop-Up systems. Consistent BBs promote shot repeatability and contribute to a more consistent trajectory.

A weight of 0.28 g for good ballistic balance

With a weight of **0.28g per BB** , this model is positioned between the light weights commonly used in airsoft and the heavier BBs intended for certain specific configurations.

Compared to 0.20 or 0.25 g pellets, **0.28 g pellets** can offer better resistance to external disturbances, especially when wind conditions influence the trajectory.

The result, however, depends on the replica's power and the **Hop-Up** setting. A replica properly matched to this BB weight will allow you to exploit its characteristics more effectively.

The weight of 0.28g thus represents a versatile choice for many players wishing to prioritize the regularity of shots without adopting particularly heavy projectiles.

A biodegradable design for airsoft fields

BLS Tracer BIO belongs to the range of **biodegradable airsoft BBs** , designed as an alternative to conventional plastic BBs.

This feature specifically meets the expectations of players and game organizers who prefer organic consumables on their fields.

It is important to remember, however, that the rate at which a biodegradable bead degrades depends on environmental conditions. Temperature, humidity, and microbial activity all influence this process. Therefore, the "bio" label does not mean the beads will disappear immediately after use.

BBs suitable for AEG and GBB replicas

BLS Tracer BIO 0.28g BBs are intended for 6mm caliber airsoft replicas compatible with this weight.

- **AEG replicas:** suitable for players looking for a consistent BB for semi-automatic or burst fire.
- **GBB replicas:** compatible when the power and Hop-Up adjustment allow the effective use of 0.28g BBs.

- **Replicas equipped with a tracer:** allow you to enjoy the green luminescent effect during night games.
- **Configurations with precision gun:** benefit from the dimensional regularity announced by BLS.

Before use, it is recommended to check the compatibility of the weight with the replica and to adjust the Hop-Up if necessary.

An economical 1 kg package

BLS Tracer BIO Green 0.28g pellets are packaged in a **1kg plastic bag** , containing approximately **3,571 projectiles** .

This format is suitable for regular players, associations and airsoft organizations wishing to have a large quantity of Tracer BBs for their sessions.

To preserve the characteristics of the beads, it is advisable to keep the bag properly closed, in a dry place, away from moisture and excessive temperatures.

FAQ

Do the green BLS Tracer BIO BBs work with all airsoft tracers?

No. The marker must be compatible with **green luminescent beads** . Some devices only support green beads, while others also accept red beads. It is recommended to check the marker's specifications before use.

Can you mix 0.28g Tracer marbles with regular 0.28g marbles?

Yes, provided that both types of BBs have a diameter and weight compatible with the replica. Only **Tracer BBs** will produce a visible trajectory with a suitable device. Mixing them allows for alternating visible and invisible shots, but the effect will depend on the BB distribution in the magazine.

Do 0.28g BBs require a special Hop-Up adjustment?

Changing the BB weight may require **adjusting the Hop-Up** . Since 0.28g BBs are heavier than 0.20g or 0.25g BBs, their performance may differ even with the same adjustment. It is advisable to check the trajectory on a suitable shooting range and gradually adjust the Hop-Up according to the replica manufacturer's recommendations.
