

NEBULA II

READ BEFORE FIRST USE

IMPORTANT INFORMATION REGARDING THE ZION ARMS SERIES NEBULA II and GEN 4 from LANCER TACTICAL

Thank you for choosing a replica from the Lancer Tactical range. The electronic components of this replica are high-performing but sensitive to transport. This requires some adjustment on your part before first use.

It is essential to calibrate the trigger before using your replica, otherwise it will not fire. Calibration is very easy and only takes a few seconds.

Please follow these 3 steps:

- 1- Put your fire selector in SAFE mode.
- 2- Connect the battery to the replica. It is normal to hear a double beep and a beep longer.
- 3- Press and hold the trigger for 5 seconds to successfully calibrate it. You will hear a double beep indicating that your replica is ready to use.

You can now set the fire selector to semi-auto or full auto mode and start playing.

Don't forget to carefully read the provided user manual to get to know your replica and get the most out of it.

Good game!
